

ESCO Product Promotions

April 2009

Dear ESCO Customer:

We are excited to announce that ESCO has an improved offering of **Infinity™ Bimetallic Buttons, Blocks, Bars and Wear Runners** with new pricing to better service our customers. Infinity bimetallic wear products are a cost effective solution to easily protect high wear areas of both mobile and stationary machinery.

Infinity products are a unique combination of 700 BHN chrome white iron castings, specially bonded to mild steel backing plates. The backing plates allow standard welding procedures for installation and the chrome white iron provides maximum wear protection for high abrasion hot spots. A wide variety of shapes and sizes ensures the right protection of any area.
